

Indigenously Developed AI Based Parental Control Router

KidSafeNet – Protecting Children, Shaping a Safer Digital Future

Abstract

KidSafeNet is an indigenously developed AI-based parental control router designed to enable a safer online environment for children. The system intelligently analyzes internet traffic, detects inappropriate and addictive content, blocks inappropriate content, and directs users to safe educational content.

The Problem

- Exposure to Inappropriate Online Content
- Addictive Short-Form Content (YouTube Shorts, TikTok, Reels)
- Inappropriate Search Results
- Inability to Monitor Encrypted HTTPS Traffic
- Lack of Context-Aware Content Analysis
- Limitations of Traditional Rule-Based Filtering Methods

Our Solution

- AI-powered system that understands content context.
- Context-aware filtering for more accurate decisions.
- Smart blocking of inappropriate content.
- Redirects children to safe and educational content.
- Real-time monitoring and activity logging.
- Protection for all devices connected to the network.

Key Features

AI-Based
Content Filtering

Smart Blocking &
Redirection
